

Independence is something to enjoy but easily taken for granted. As we lose vision, we also begin to lose our independence. It is my goal to help older people with low vision reclaim that independence.

When my mother-in-law, Jean, (above) was 94 her macular degeneration progressed to the point that she could no longer read books using her Kindle tablet. That was a crushing blow to her because reading was her favorite thing to do. Without the ability to see she not only couldn't read but needed help from family for many of the things she needed to do. Her independence was lost!

My engineering background kicked in and I developed a special computer program to allow her to read again. I took a touch-screen computer and completely rewrote the book reader software. Despite having no computer skills, Jean found that EZReader was extremely easy to use and she was able to read books independently until she passed away a few years later.

Over time, I continued to develop EZReader. It is now more than just a book reader. EZReader offers the ability to read and listen to books, to receive and send email and text messages and to use a camera to magnify printed materials for viewing on the computer. It additionally offers dozens of other programs customized to enable a low vision user to see and use the computer more easily.

With EZReader, you or your loved ones no longer have to depend on family or friends to do everything for you. EZReader users are able to order food online, pay their bills online, send emails and text messages to friends and family, keep their own calendar and view newspapers and printed materials. They can even play a special version of Solitaire (and other games) written especially for low vision users!

Making operating the computer easy to use was a primary goal for me. You can change colors, use unlimited font sizes and operate EZReader with a touch of your finger. **EZReader screens are designed with visual simplicity in mind, making it very easy for low vision users to see and read screen content.**

EZReader cannot restore your vision loss, but it will help you make the most out of the vision you have left just like it did for my mother-in-law.

With EZReader, you will reclaim more independence than you have had in a long time.
