

EZReader Shade Application

For users whose eyes are sensitive to bright colors or to specific colors, the Shade app can place an opaque window over the entire desktop. It's color and transparency can be controlled by the user.

Any EZReader app opened after Shade has opened will appear on top of Shade. is intended to cover non-EZReader apps.

Shade Main Screen

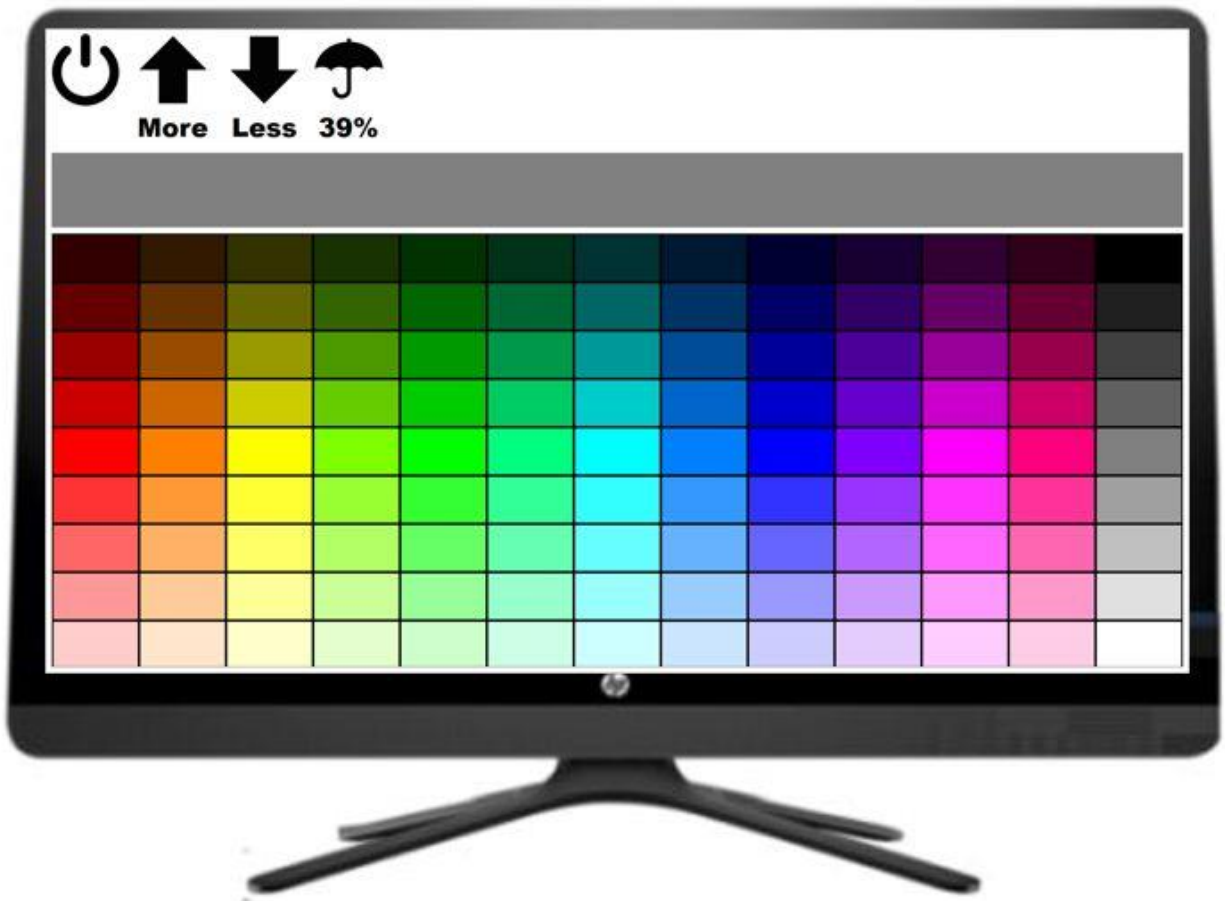

In this image, Shade covers the entire desktop with a slightly orange, opaque window.

Shade has no toolbar.

Adjusting Shade

When Shade is turned on, the UserColor app can be used to adjust the color and opacity of Shade. Click on the toolbar buttons More/Less to adjust transparency. Left click on any color to select the color Shade will display.

The toolbar icons provide the following functions:

- More - More Shade
- Less - Less Shade
- Transparency -
